Brand & Design System Guidelines

Version 1.0 · April 2026

Contents

- 01 Brand Foundation**
Mission, positioning, brand essence
- 02 Website Palette**
Core 6-color palette for marketing surfaces
- 03 Typography System**
Georgia + Inter pairing, type scale
- 04 Design System — Extended Palette**
Full tonal ramps, neutrals, component colors
- 05 Semantic Colors**
Success, warning, error, info — light & dark
- 06 Data Visualization**
Sequential, categorical, diverging palettes
- 07 Dark Mode**
Surface, text, and accent specifications
- 08 Contrast & Accessibility**
WCAG audit of key combinations
- 09 Component Patterns**
Buttons, pills, cards — M3-inspired
- 10 Design Principles**
M3-inspired framework, Homium-specific rules

BRAND ESSENCE

Homium exists to unlock the benefits of homeownership for everyone. Through shared appreciation financing — fair, transparent, and requiring no monthly payments — Homium bridges the affordability gap that traditional lending cannot reach. The brand must communicate trust, innovation, and social impact in equal measure.

POSITIONING

Homium occupies a unique space: a fintech platform with the rigor of institutional finance and the mission of a social enterprise. It is not a bank. It is not a charity. It is a new category — technology-enabled, community-driven housing finance — and its visual identity must reflect that duality.

BRAND PILLARS

Fair & Transparent

No hidden fees, no extractive terms. Every product decision prioritizes homeowner wellbeing alongside investor returns.

Secure & Data Rich

Institutional-grade infrastructure. Real-time portfolio visibility. Blockchain-verified ownership records.

Value-Driven Innovation

Technology serves the mission, not the other way around. Every feature must advance housing affordability.

AUDIENCE

Primary: Institutional investors, mortgage lenders & originators, internal operations teams. Secondary: Housing finance agencies, municipalities, community development organizations. The platform experience is designed for professionals who spend extended time reviewing data, managing pipelines, and making financial decisions.

CORE BRAND PALETTE — WEBSITE & MARKETING

A restrained, high-trust palette for homium.io and all outward-facing materials. Six colors maximum. Warm neutrals differentiate Homium from cold-blue fintech competitors while signaling approachability — critical for a housing product.

USAGE RULES

- ✓ Sand (#F2F1EC) as default page background — not white
- ✓ White (#FFFFFF) only for cards and elevated surfaces to create depth
- ✓ Green (#14935F) reserved exclusively for primary actions and links
- ✗ Never use green for decorative elements, illustrations, or backgrounds
- ✓ Teal (#00334A) for all headings and the logo mark — consistent anchor
- ✗ Never mix Teal and Midnight for headings — one per context
- ✗ No gold, amber, or warm accent colors (killed from Palette 2)

TYPOGRAPHY SYSTEM

Georgia for headings signals permanence and trust — appropriate for a 30-year financial product. Inter for body text provides maximum legibility at small sizes for data-dense interfaces. DM Sans is an acceptable alternative with slightly more personality.

Display	Homium
Headline 1	Shared Appreciation
Headline 2	Fair & Transparent
Title	Pool Summary
Body	Homium bridges the homeownership affordability gap through shared appreciation financing.
Caption	Weighted Average Original FICO
Label	VIEW BIO →
Mono	\$1,820,000.00

FONT PAIRING RATIONALE

Georgia (serif) for Display and Headline roles communicates heritage, stability, and permanence. These are values that matter when asking someone to trust you with a 30-year shared appreciation loan. Inter/DM Sans (sans-serif) for Title, Body, Label, and Caption roles communicates clarity, modernity, and precision — essential for data-heavy platform interfaces where legibility at 11px and below is critical.

TEAL RAMP — BRAND ANCHOR

				
#00334A	#0A4D6B	#1A6E8E	#A3C5D4	#E0EDF3
900 Brand	700 Hover	500 Focus	200 Fills	50 Tint BG

GREEN RAMP — PRIMARY ACTION

				
#0D6B40	#117A4A	#14935F	#A8D7BE	#E4F3EB
900 Pressed	700 Hover	500 Default	200 Fills	50 Pill BG

WARM NEUTRALS

				
#061D29	#2D3E4A	#6B7A85	#9BA6AE	#C4C9CC
Midnight Primary text	Slate Secondary	Gray 500 Muted	Gray 300 Placeholder	Gray 200 Disabled

				
#E0DDD6	#EDEBE6	#F2F1EC	#F8F7F4	#FFFFFF
Stone Borders	Warm Gray Subtle	Sand Page BG	Pearl Alt surface	White Card

M3 TOKEN MAPPING

Material 3 Role → Homium: Primary = Green (#14935F), Secondary = Teal (#00334A), Tertiary = Teal 500 (#1A6E8E), Error = #C4382A, Neutral = Warm gray ramp, Neutral Variant = Stone ramp. Custom neutral tonal ramps are required — do not auto-generate from Theme Builder as it will produce cool minty grays that conflict with the warm brand.

SEMANTIC SYSTEM — LIGHT MODE

Critical for financial platforms. Success green (#1A8754) is intentionally distinct from CTA green (#14935F) to avoid ambiguity. CTAs are interactive elements; success indicators are status signals. They never appear in the same context.

	Success Gains, confirmations, loan funded, appreciation	FG: #1A8754 BG: #E4F3EB
	Warning Pending review, approaching limits, attention needed	FG: #B8860B BG: #FEF3E2
	Error Failed, rejected, overdue, depreciation	FG: #C4382A BG: #FDE8E6
	Info Neutral information, tooltips, onboarding cues	FG: #1A6E8E BG: #E0EDF3

FINANCIAL-SPECIFIC SEMANTICS

	Appreciation / Gain	Home value increase, positive returns	#1A8754
	Depreciation / Loss	Home value decrease, negative returns	#C4382A
	Neutral Change	No change, flat performance	#6B7A85
	LTV Safe	Within target loan-to-value range	#1A8754
	LTV Caution	Approaching LTV threshold	#B8860B
	LTV Critical	Exceeds target LTV	#C4382A

SEQUENTIAL — TEAL RAMP

For choropleth maps (Loan by Location), heatmaps, and single-metric intensity scales. Lightest = lowest value, darkest = highest.

CATEGORICAL — 6 COLORS

For comparing distinct categories: loan programs, entity types, vintage groups. Teal (#00334A) always leads as the first color.

DIVERGING — RED ↔ GREEN

For appreciation vs depreciation, gain vs loss, positive vs negative change. Center on neutral sand.

DARK MODE VISUALIZATION

Adjusted for contrast on dark surfaces. Same hues, increased brightness and saturation.

DARK SURFACES

#071620	#0A1F2E	#122A3A	#1A3A4D	#234A5E
Background Page base	Surface 1 Cards	Surface 2 Elevated	Border Dividers	Hover Interactive

DARK TEXT

FFFFFF	#E8E4DF	#8A9BAA	#5A6E7D
Primary Headings	Secondary Body text	Muted Captions	Disabled Inactive

DARK ACCENTS

#1EAA6E	#22B878	#E07B6F	#DBA64A	#5AAFCC
Green CTA Brightened	Success Positive	Error Softened	Warning Softened	Info Brightened

DARK MODE RULES

1. Never use pure black (#000000) — always teal-tinted darks to maintain warmth.
2. Accent colors shift 10-15% brighter to maintain contrast on dark surfaces.
3. Green CTA shifts #14935F → #1EAA6E for 4.5:1 contrast on dark surface.
4. Borders shift from warm stone to cool teal-gray to avoid muddy appearance.
5. Body text uses warm white (#E8E4DF), not pure white, to reduce eye strain.
6. Data viz colors are individually adjusted — never auto-invert the light palette.

WCAG CONTRAST AUDIT — LIGHT MODE

All primary text and interactive combinations must pass WCAG AA (4.5:1 for normal text, 3:1 for large text). Below are the key combinations used in the Homium system.

	Aa	Teal on Sand — headings on page background	11.8 AAA
	Aa	Midnight on Sand — body text on page background	15.3 AAA
 	Aa	Midnight on White — body text on cards	17.3 AAA
 	Aa	Green on White — CTA button text inverse	3.9 AA-L
 	Aa	White on Green — CTA button label	3.9 AA-L
 	Aa	White on Teal — nav bar, header text	13.4 AAA
 	Aa	Gray 500 on White — muted text on cards	4.4 AA-L
 	Aa	Gray 500 on Sand — muted text on page	3.9 AA-L
 	Aa	Success on White — status indicators	4.5 AA
 	Aa	Error on White — error indicators	5.3 AA

WCAG CONTRAST AUDIT — DARK MODE

 	Aa	White on Surface 1 — headings on cards	16.8 AAA
 	Aa	Secondary text on Surface 1	13.3 AAA
 	Aa	Muted text on Surface 1	5.9 AA
 	Aa	Green CTA on Surface 1	5.6 AA
 	Aa	Error on Surface 1	5.8 AA

BUTTON SYSTEM

STATUS PILLS

CARD PATTERN

ELEVATION MODEL — FLAT + BORDERS

Departure from Material 3's shadow-based elevation. Cards defined by warm stone borders (#E0DDD6) and surface color shifts (#FFFFFF on #F2F1EC). Shadows reserved only for overlays: modals, dropdowns, tooltips. This reduces visual noise in data-dense interfaces.

DENSITY

Compact density as default for professional users: 36px table rows, 32px input heights, 28px chips. Material 3's default 48px spacing is designed for consumer apps. Offer a 'comfortable' toggle for users who prefer standard density.

SHAPE SCALE

- 4px — Chips, pills, small elements
- 6px — Inputs, dropdowns, selects
- 8px — Cards, panels, containers
- 12px — Modals, dialogs, sheets
- Full — FABs, toggles, avatars

DESIGN PRINCIPLES — M3-INSPIRED, HOMIUM-BRANDED

Homium's platform uses Material Design 3 as a UX reference — borrowing interaction patterns, accessibility standards, and state management — while applying a fully custom visual layer. Material's bones, Homium's skin.

01 Strategy Before Decoration

Every visual decision traces back to a strategic truth about the audience, the market, or Homium's mission. Color is not decoration — it carries meaning: green means action, teal means trust, red means loss.

02 Warm Neutrals, Not Cold Grays

Homium's sand and stone palette (#F2F1EC, #E0DDD6) is the brand's strongest differentiator. Most fintechs use cold #F5F5F5 grays. Homium's warm undertone signals humanity — essential for a housing product.

03 Data Density Over Decoration

Institutional users need information, not whitespace. Compact density (36px rows, 32px inputs) is the default. Every pixel should serve comprehension.

04 Flat + Borders Over Shadows

Cards defined by borders and surface color shifts, not drop shadows. Shadows are reserved for overlays (modals, dropdowns). This keeps data-dense interfaces clean.

05 Semantic Precision

Green CTA ≠ green success. Every color carries exactly one meaning. Status colors (success, warning, error) are never used decoratively. Financial data uses a fixed red/green vocabulary for gain/loss.

06 Accessibility Is Not Optional

WCAG AA minimum for all text. Touch targets ≥ 44px on interactive elements. Keyboard navigation for all flows. Screen reader support for data tables and charts. Color is never the sole differentiator.

07 System Over Artifact

A logo is a moment; a design system is a language. Every component, color, and spacing decision must work as part of the system, not as a one-off. If it doesn't scale, it doesn't ship.
